VOL. VI. DECEMBER, 1916. NO. 12.

Edited by EDWARD JACKSON. Assisted by WILLIAM H. CRISP.

INDEXES.

The present number, completing volume six, is largely given over to the annual indexes. These are three—the Book Index, the Index of Authors' Names, and the Index of Subjects. The Book Index indicates where reviews, or briefer notices of books published during the year are to be found. Knowing an author's name, one may find in the Index of Authors references to all papers he has published during the year. Where references to a particular subject are sought, the Index of Subjects is to be used very much as an ordinary book index.

If it is desired to cover the ground very thoroughly, it will be best to go over each number of the year and examine the particular headings under which that subject might be mentioned. For example, in looking up traumatic cataract, one might examine the lists of papers on "Crystalline Lens," and also papers upon "Injuries."

The repeated titles often render accessible the essential part of a paper, the original of which would be entirely out of reach. These give (in brackets) after the author's name, the volume and page of OPHTHALMIC LITERATURE where the title of the paper will be found, then the journal, volume and page where the translation or abstract is published.

MISSING NUMBERS.

Subscribers are requested to look over their files at once, and if any numbers are needed to complete the same, to apply for these immediately. Complete sets of OPHTHALMIC LITERATURE are now obtainable only with difficulty, and will become more valuable from year to year.

BOOK NOTICES.

Moffat, John L., New York City. **Homeopathic Therapeutics in Ophthalmology.** 12mo., 172 pages, Philadelphia: Boericke and Tafel. 1916.

This book opens with a brief chapter upon Hahnemann, and a longer one on Homeopathy. Its third chapter, of 106 pages, deals with the materia medica according to the homeopathic method, enumerating the symptoms believed to be derived from the drug under the headings: Objective, Subjective, Vision, Characteristics, and Clinical. The drugs considered number 136, the author explaining that, "This book is small, the remedies comparatively few, because only reliable indications have been given."

Chapter four, which completes the work, includes a clinical index of: Diseases, Subjective Symptoms, Vision, Aggravations, Ameliorations, Conditions and Characteristics, each being arranged alphabetically, and each followed by the abbreviated titles of the articles in the materia medica to be studied in connection with that condition.

For the oculist who hopes for assistance from homeopathy the book will prove very convenient and helpful. For those who wish to

know what homeopathy means the second chapter, illustrated by the third and fourth, affords a clear and condensed account of the subject, as seen by one whose enthusiasm for it is demonstrated in his preface.

JOURNAL ESTIMATES OF THE YEAR BOOK.

"We make the annual welcome to the Ophthalmic Year Book. It is somewhat enlarged and carries perhaps a larger amount of American and English abstracts than heretofore. The work is commended for the library of ophthalmologists."—Ophthalmology, v. 12, p. 203.

This welcome yearly visitor needs no introduction to our readers. We know that it is an excellent digest of the ophthalmic literature, and the names of the men with whose collaboration it is published warrant nothing but good work.—American Journal of Ophthalmology, v. 32, p. 319.

Though the book is somewhat larger than in preceding years, the size of the single abstract has not become too long. The amount of labor which a book of this kind entails cannot be comprehensible to one without personal experience in abstracting, and the mere arrangement of the reviews is no light task. The editor and his collaborators deserve our gratitude; and any support that we can furnish to the project by subscribing should be unhesitatingly given.—Archives of Ophthalmology, v. 45, Jan.

We have so often expressed our high opinion of this annual volume that further commendation may seem superfluous. It is, however, only fair to say that the eleventh volume worthily maintains the reputation gained by the previous numbers. The Year Book has become an essential part of the library of the ophthalmic surgeon. The general arrangement of the contents of the volume is unaltered. The excellent bibliography and index, upon which we have learned to rely, are as complete and satisfying as ever.—Ophthalmic Review, v. 34, p. 353.

We extend the heartiest possible welcome to volume 11 of Edward Jackson's Ophthalmic Year Book, a work indispensable to any ophthalmic surgeon who is not wholly indifferent to the literature of his specialty.—Ophthalmoscope, v. 13, p. 584.
